MEMORANDUM

FROM: TOM BOYCE

DATE: 12/31/15

SUBJECT: TERRALOGIC

I have recently had the pleasure to work with Art Hirsch/TerraLogic on a project for the State Transportation Innovation Council (STIC). The project was the CDOT Revegetation Training Modules. His team included Aaron Dejoia (Duraroot) and Michael Conti (Conti Productions) among others. The training was based off of work the TerraLogic team performed on the CDOT Applied Research and Innovation Branch study, "Assessment of CDOT Revegetation Practices for Highway Construction Sites."

The project was a huge success. CDOT STIC members, CDOT management, and CDOT engineers and environmental staff were impressed with the products. I am very excited about the training and am assured that it will not only improve CDOT's performance with revegetation efforts on our projects, but result in project cost savings, administrative efficiency, shorter close-out times for stormwater permits, maintenance savings, and serve as an excellent model for future trainings.

Art and his team were very easy to work with and developed and delivered a product that exceeded my expectations. The work was on time and on budget. The quality was excellent and the customer service was above and beyond.

I look forward to working with TerraLogic again on future projects.

The CDOT HRED Section would like to thank TerraLogics and the team for both the research study and the training product and acknowledge the work, innovation, and dedication to accuracy and detail that they exhibited throughout the projects. CDOT projects, the HRED Section, and environmental compliance will definitely be the beneficiaries of this important work.

Sincerely,

Tom Boyce
